

Bank Credit Card Policy

Sample banking policy document for use with the banking RAG chatbot.

1. Purpose

This policy provides general sample rules for credit card usage, payments, limits, interest, fees, and security.

2. Credit Limit

Each credit card account is assigned a credit limit based on the product terms and the customer's approved credit facility.

Transactions that would exceed the available credit may be declined unless the product permits otherwise.

3. Purchases

The card may be used at merchants and channels supported by the card network and issuing bank. Customers should review each transaction for accuracy.

4. Statement and Payment

A periodic statement shows purchases, payments, fees, credits, and the amount due. Customers should make at least the required minimum payment by the payment due date.

Paying the statement balance in full by the applicable due date may help avoid interest on eligible purchases, subject to the card agreement.

5. Interest

Interest may apply to unpaid balances according to the applicable annual percentage rate or other rate specified in the card agreement.

Different transaction types, such as cash advances, may have different interest and fee rules.

6. Fees

Fees may apply for services or events described in the card agreement, such as late payments, cash advances, foreign transactions, or replacement services.

7. Cash Advances

Cash advances are subject to the card's available cash-advance limit and applicable fees and interest rules.

8. Unauthorized Transactions

Customers should report suspected unauthorized card transactions immediately through official bank channels and follow the bank's dispute process.

9. Card Security

Customers should never share their PIN, password, one-time password, or full authentication credentials. Lost or stolen cards should be reported promptly.

10. Important Note

This is a fictional/sample policy created for software testing and RAG demonstration. It is not the policy of a real bank and should not be used for financial or regulatory decisions.
